

ABSTRACT OF THE DISCLOSURE

A sheet-position detection device has a stop unit for temporarily stopping a sheet conveyed along a sheet conveying path, and a sheet-position detector for detecting a position of the sheet in a direction transverse to a conveying direction of the sheet during the stop of the sheet. The stop unit includes a pair of rotating members for rotating in order to convey the sheet while grasping the sheet, and a sheet-position detector detects an edge of the sheet parallel to the sheet conveying direction.
